IS YOUR DATA SECURE?

The Office for Civil Rights (OCR) recently fined a healthcare organization \$2.2 million dollars over a single lost USB drive! Are you ready for an OCR audit? Do you need assistance in finding cost effective solutions to meet HIPAA requirements or to prepare for the next wave of phishing, ransomware and medical device security threats?

2016 was a record year for healthcare data breaches, and experts predict that the threats will continue to increase. With the OCR preparing its next wave of proactive audits, now is the time to ensure that your organization is prepared to meet the compliance and security challenges of 2017 and beyond.

Perhaps the most challenging and specialized aspect of the healthcare IT industry is the cat-and-mouse information security sector. Is your hardware secure? Is your network secure? Is your data secure? Is your email secure? Is anything secure? Are you sure?

There is no 'plug-and-play' or 'one size fits all' solution. The threats are always evolving and so must your organization to keep pace – to protect your patients. The market is flooded with flashy solutions that promise to solve all your problems with the flip of a switch.

CYBER SECURITY BATTLE PLAN FOR HEALTHCARE

As data security threats continue to grow, the Office for Civil Rights has significantly stepped up its enforcement of the HIPAA security rule. For years, Trustpoint has been working alongside healthcare providers of all sizes to develop and implement cost-effective security programs to meet the evolving threat landscape. Along the way, we have accumulated some of the best talent and industry-specific guidance available.

Trustpoint is now offering an affordable program to provide hospital leadership with the same level of security guidance afforded to national leaders in healthcare. This program combines assessment, strategy, advice, tactics, and architectural guidance tailored to the size and specific capabilities of your organization.

Read on to learn how we can help you safeguard your patient data and the resiliency of hospital operations amid evolving security threats.

HOW IT WORKS

We pair you with an experienced IT Security advisor who will work with you to develop a tailored solution using industry best practices.

Our initial assessment will determine your organization's current state and your trusted advisor will drive the approach to address the findings.

OUR APPROACH

HIPAA RISK ANALYSIS & RISK MANAGEMENT

- HIPAA risk assessment for primary EMR platform.
- Vulnerability assessment of client perimeter.
- Present results, potential risks and remediation strategies.

SECURITY REMEDIATION MANAGEMENT/ADVISORY

- Advise of potential threats, costs and best practices for addressing specific identified risks.
- Provide vendor analysis support.

SECURITY PROGRAM DEVELOPMENT

- Support development of overall risk management strategy, provide guidance for relevant policy & procedure updates and help to build the risk informed security program.
- Security team staffing analysis.

ONGOING SUPPORT

- CISO/ISO/Analyst mentoring & coaching.
- Executive Leadership support, audit readiness and annual budgeting and prioritization advice.
- Annual briefing of industry trends and emerging threats for executives
- Technical & Operational team support with best practices and vendor analysis.

KEY BENEFITS

- A scaled approach designed to address the specific needs of your organization.
- Access to premium, expert-level resources on a fractional basis.
- Encourages wholesale change of security culture enterprise-wide.
- Benchmarks the organization relative to peers/industry.
- Accelerates implementation of a high quality security program and team.
- Integrates with industry accepted frameworks (NIST, ISO, etc).
- Assesses and communicates the "threat" to all levels of the organization (common understanding).
- Ensures proposed solutions are the "best fit" for remediation – reduces complexity, saves time and money.
